Summary

- Iterative HCI Design
- Design Methods
- Stakeholders

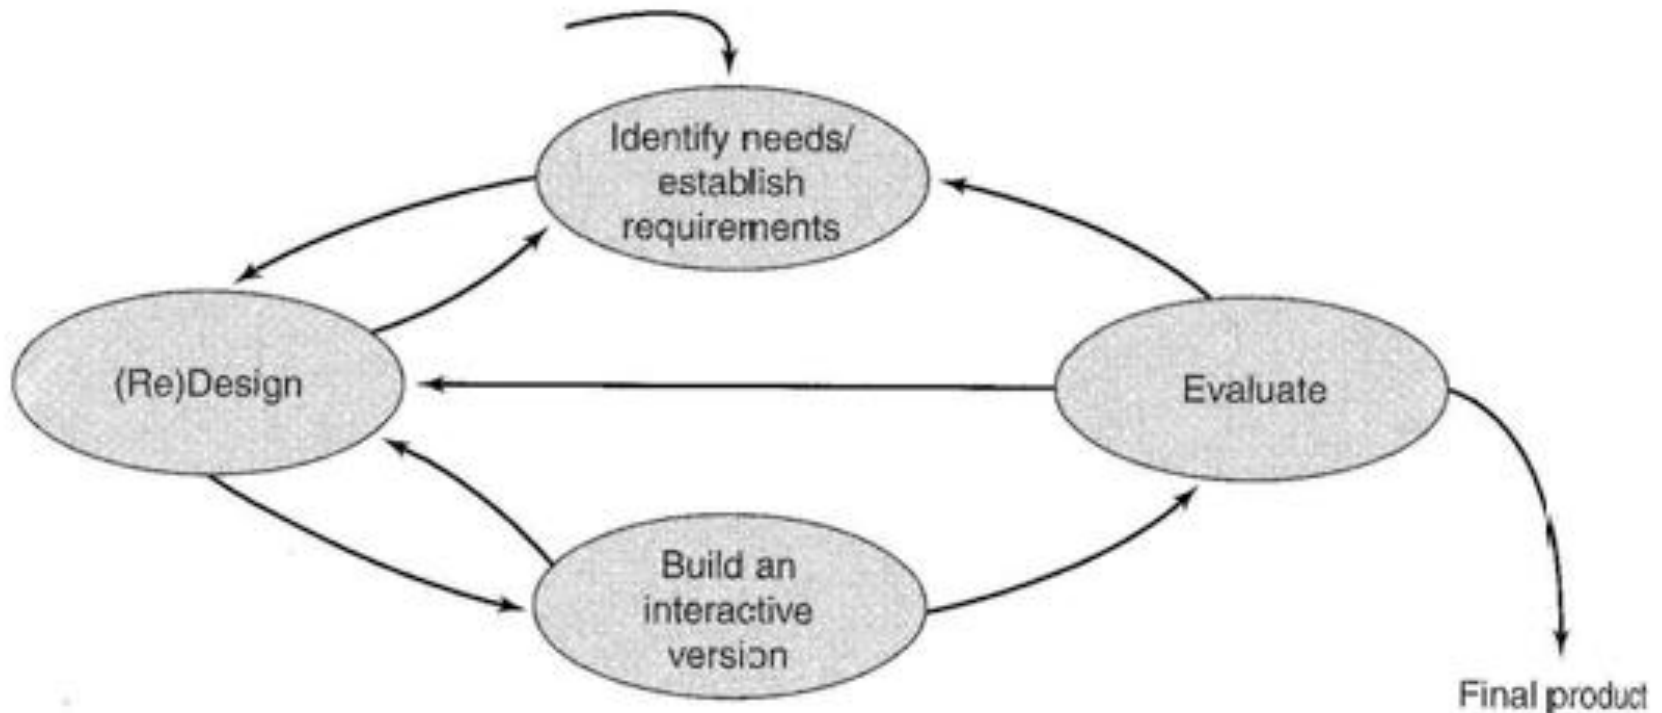

Design Process

Different design process models have been proposed

Who and what are these models for?

Simple interaction design model

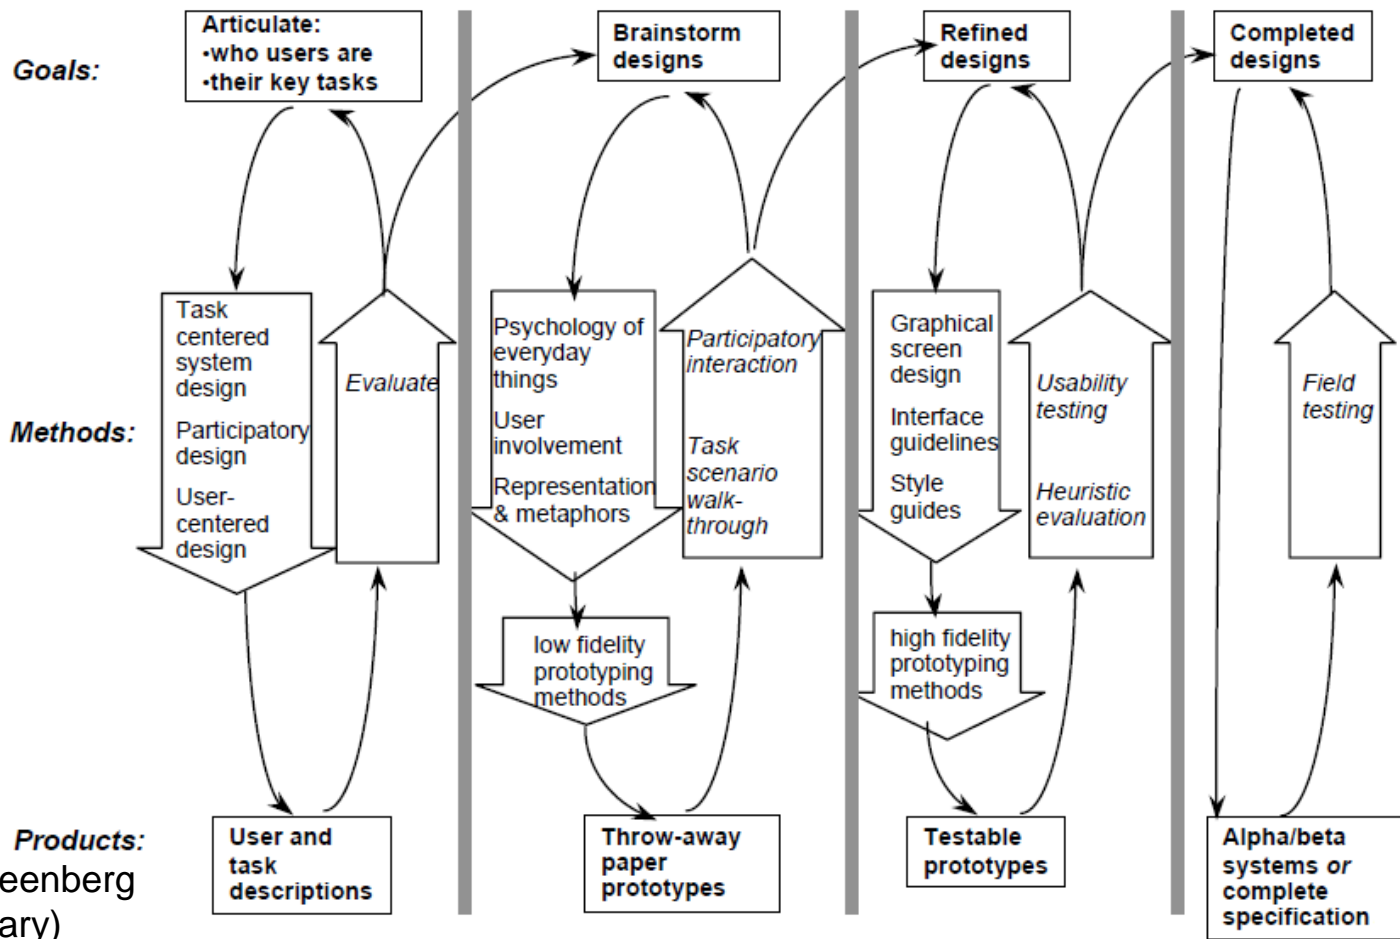

Interaction Design: Beyond Human Computer Interaction
Preece, Rogers & Sharpe, 2002

Four components

1. **Identify needs/establish requirements:**
 - Core to design process – know thy user!
2. **Developing alternative designs**
 - Includes both conceptual design and physical design
3. **Building interactive versions of the designs**
 - Not necessarily software: create prototypes (including simple mock-ups) that can be evaluated by users
4. **Evaluating designs**
 - Ideally involving users at every stage, feeding evaluations back into the design process
 - Much easier to do if clear usability and user experience goals have been identified up front

Interface Design and Usability Engineering

Products:
Saul Greenberg
(U Calgary)

Bowing to reality

- What makes it hard to follow the “ideal” process?
 - Deadlines
 - Budget
 - Access to appropriate users
 - Involvement late in design cycle
 - Valuation of HCI input by other parts of the organization

What do you do then?

Stakeholders

Stakeholder = anyone who has some reason to care about the interface

- Can be lots of them!
- Needs may conflict
- User: convenience, functionality, ...
- Boss: price, worker efficiency
- Developer: ease of development - deadlines, budget
- Manufacturer: cost of production
- Advertiser: visibility
- ... more

How to figure out who your stakeholders are

- Who will ask for it?
- Who will use it?
- Who will decide whether to use it (or if someone else will use it?)
- Who will pay for it?
- Who has to make (design / build) it ?
- Who has to make a profit from it?
- Who will otherwise make your life miserable if they don't like it?
- ???

roadmap to evaluation types

pre-design

ethnography
interviews,
focus groups
questionnaires,
surveys

early design

interviews,
focus groups,
observation
questionnaires,
surveys
contextual inquiry &
work modeling
task analysis,
task / cognitive
walkthroughs
participatory design
heuristic evaluation

mid-late design

observation,
interviews,
questionnaires
*using advanced
prototypes*
heuristic evaluation
formal
performance /
usability testing

→ *evaluation material (prototype) evolves* →

pre design

early design

mid-late design

Goals:

Articulate:
-who users are
-their key tasks

**Brainstorm
designs**

**Refined
designs**

**Completed
designs**

Methods:

Task
centered
system
design

Evaluate

Participatory
design
User-
centered
design

Psychology of
everyday
things
User
involvement
Representation
& metaphors

*Participatory
interaction*
*Task /
Cognitive
scenario
walk-
through*

Graphical
screen
design
Interface
guidelines
Style
guides

*Usability
testing*
*Heuristic
evaluation*

*Field
testing*

Products:

**User and
task
descriptions**

**Throw-away
paper
prototypes**

**Testable
prototypes**

**Alpha/beta
systems or
complete
specification**

Important things for today

- Design is an iterative process
 - Evaluation is key!
- There are several HCI design models
 - Choose one? Adapt one?
- Identifying stakeholders
 - Vital since they are the ones that **care**
